

SAVE THE DATE

Monday, December 3, 2018, Helsinki, Finland

A seminar/workshop jointly organized by the National Land Survey of Finland (NLS), Aalto University, Finnish Location Information Cluster and the World Bank.

SMART LAND ADMINISTRATION

In early December, the top actors of the global tech scene meet in Helsinki. The world's leading annual startup event Slush is organized right next to the National Land Survey of Finland head office, and it is estimated to assemble 20,000 attendees. This is an excellent opportunity to come and learn how technology will change the World and Land Administration beside it. To utilize this opportunity, we will organize a Slush side event dedicated to Land Administration just a day before Slush itself.

The full day Smart Land Administration seminar include sessions on

- **DISRUPTIVE TECHNOLOGIES.** In this session, the impact of technology is discussed by world top influencers of the industry.
- **PLATFORMS IN LAND ADMINISTRATION.** We will learn and evaluate the impact of platform economy to the land administration operations as well on the government as the private and NGO sectors.
- **BENEFITS FROM USING THE DATA.** The final session will include examples and visions of the new ways of using geospatial data and benefits gained from the usage.

Registration to the seminar will open in September. The event is sponsored by the local industry and the NLS thus allowing a limited number of 120 professionals to attend. Helsinki will be packed with visitors and therefore you will need to act fast to be able to join.

The participants can benefit from the technology events that will take place before and after the seminar. The seminar attendees will have a possibility to follow Ultrahack finals event on December 1-2, which is a hackathon including geospatial themes. Right after the Smart Land Administration seminar on December 4-5 the Slush itself will go off. Those interested in Slush need to register separately.
