

11 – 16 April 2010

# Combining CORS networks, automated observations and processing, for network RTK integrity analysis and deformation monitoring

Paul Drummond

Trimble Navigation Limited / New Zealand

[paul\\_drummond@trimble.com](mailto:paul_drummond@trimble.com)

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## Paper objective:

- Educate about GNSS positioning
- give value to RTK network integrity management and CORS data
- explore how GNSS network operators and surveyors can support monitoring projects and expand their business

## • Slides

- GNSS methods
- CORS>network RTK>integrity management
- Monitoring field techniques with survey equipment
- CORS>networks>deformation monitoring and automation
- Automated integrated surveying

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## GNSS methods

- Observables
  - Code
  - Carrier phase
  - RT & PP

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## CORS > nRTK > int. mngmt

- Continuously Operating Reference Station
  - GPS or GNSS
  - RT and/or PP

West Wyalong CORS –  
AUSCOPE and CORSnet-NSW

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## CORS > nRTK > int. mngmt.

- CORS provides “active control”
  - Control that is “alive”
    - observed automatically
    - no site visit to observe
  - Streamlined monumentation management for public and private benefit

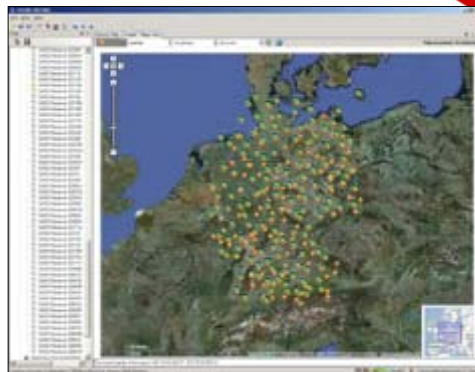

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## CORS > nRTK > int. mngmt.

- Network RTK
- Using CORS for wide area modeling iono, tropo and satellite orbit errors
- Optimise rover precision

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## CORS>nRTK>int. mngmt.

- Network RTK
  - Industry accepted methods (RTCM)
    - VRS Virtual Reference Station™
      - Non-physical or computed reference
    - MAC Master Auxiliary Concept
  - nRTK requires accurate and homogenous CORS coordinates

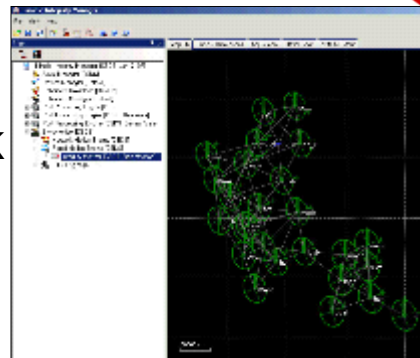

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## CORS>nRTK>int. mngmt.

- Integrity Management
  - Vital for any network
    - RT or PP
  - Critical for network RTK
  - Manually>Geodesist
  - Automatically>Trimble Integrity Manager software or similar

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## CORS > nRTK > int. mngmt.

- Integrity Management
  - Gives assurance of QOS
  - All computation, alarming and reporting automated

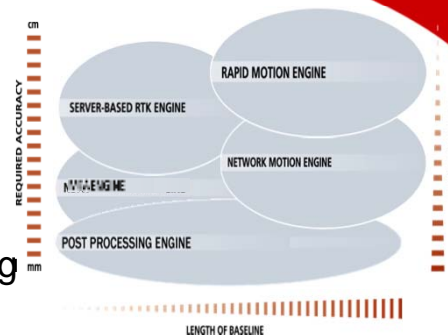

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## CORS > nRTK > int. mngmt.

- Integrity Management
  - Automation allows multiple processing methods to be employed
  - Detects sudden or long term movements

Trimble GNSS processing engines

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## Field techniques

- Shifting topics slightly...
- Techniques for monitoring with survey equipment
  - Campaign style
  - Installation style

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## CORS >nw.>def. mon. & auto.

- nRTK operators start using CORS for control for other projects
- ***Applying integrity management techniques to enable GNSS deformation monitoring***
- Installation style monitoring growing
- RT and PP CORS data has value

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

# CORS > nw. > def. mon. & auto.

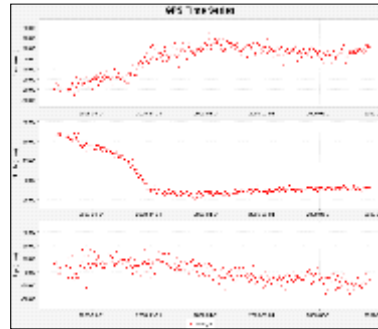

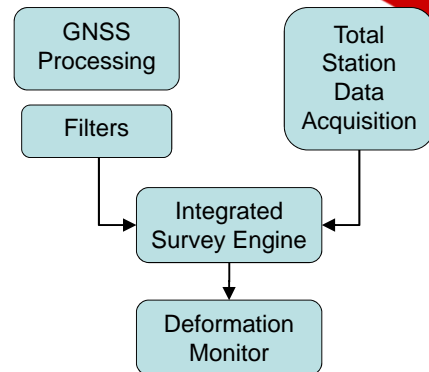

Image source: <http://www.geonet.org.nz/resources/gps/timeseries/index.html> accessed July 2009 for UTK1 station data

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

# Auto. integrated surveying

[www.fig2010.com](http://www.fig2010.com)

11 – 16 April 2010

## Auto. integrated surveying

- Choose the sensor for the job or combine

GNSS sensor technology		Terrestrial / Optical sensor technology	
Advantages	Disadvantages	Advantages	Disadvantages
No line of sight	Needs open sky	No sky view required	Line of sight required
Reference can be kilometres away	Nearby objects can cause multipath	Very high precision	Dust, fog and rain can reduce the maximum distance
Continuous all weather operation	Power and communication may be required at each point	Power and communication only required at the instrument	Refraction errors increase over distance
Antenna setup simple		Passive targets relatively cheap	Higher latency with many targets
Low latency		Easy to increase the point number/coverage	
Network RTK solution i.e. VRS			

[www.fig2010.com](http://www.fig2010.com)

FIG SYDNEY 2010

11 – 16 April 2010

## Concluding remarks

- CORS networks are a central point for all positioning professionals
- Integrity management is vital for CORS network services
- Monitoring market is growing due to:
  - aging infrastructure
  - global awareness
  - growth of GNSS as monitoring tool to aid engineers
  - automation of monitoring tools

[www.fig2010.com](http://www.fig2010.com)

FIG SYDNEY 2010

11 – 16 April 2010

## Thanks

- At Trimble booth until mid-afternoon today
- paul\_drummond@trimble.com
