Aims of Presentation

i3 mainz

- use of GPS positioning technology
- local horizontal and vertical reference system
- fusion of spatial data obtained from different sources
- benefits achievable from a digital terrain model
- design and implementation of an Internet presentation

DHM Applications (1)

**Volume Calculation, Historical Theatre
DHM Manipulation**

Question: earth mass removal when building the theatre ?

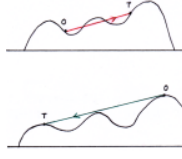

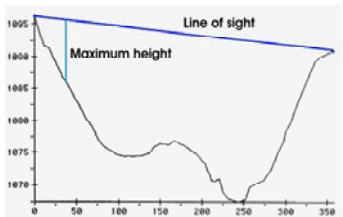

Solution:
remove points inside bounding polygon
--> interpolate surface from surrounding terrain
--> calculate difference between measured and interpolated surface

DHM Applications (2)

Line of Sight Analysis at the Historical Theatre

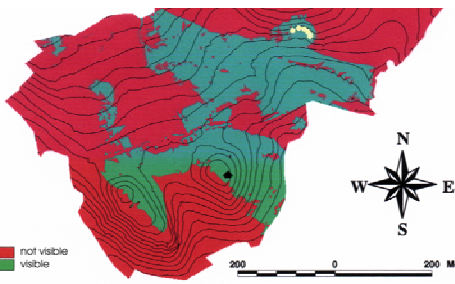

Question: maximum height of theatre scenery to keep the panoramic view which includes the temple on top of the hilllock ?

Conclusions

i3 mainz

- synthesis of spatial data of many kind needs well observed spatial data properties (geometric accuracy, spatial reference system, etc.)
- benefits from state-of-the-art spatial analysis functionality depend on requirements of application
- WWW technology provides a platform for easy information exchange within the community of all involved persons
