Overview

- Introduction
- Automatic Registration Method
- Experiments & Discussion
- Summary & Outlook

02 July 2007

Why registration?

02 July 2007

Laser intensity imagery

02 July 2007

Available Registration Approaches Review

Artificial marker - usually supported by the operating software of commercial terrestrial laser scanners.

Iterative Closest Point (ICP) - How to get the proximity and the establishment of correspondent point relation during each iteration are the two important issues.

Object-based - the determination of corresponding objects in different point clouds is a complex process.

Research needs to be carried out towards high efficiency and practicability!

Automatic Registration – Process Overview

02 July 2007

7

Automatic registration

Pixel-to-pixel Correspondence – Image pyramid

The strategy of **coarse-to-fine** matching on image pyramid is used to increase the **convergence radius**.

02 July 2007

8

Pixel-to-pixel Correspondence – Feature point extraction

The Moravec Operator

$$M(i, j) = \frac{1}{8} \sum_{k=i-1}^{i+1} \sum_{l=j-1}^{j+1} |I(k, l) - I(i, j)|$$

Since feature points have **small neighborhood**, raw images are divided into **grids** and every grid has only **one** feature point extracted to ensure **reasonable distribution** of feature points.

02 July 2007

9

Pixel-to-pixel Correspondence – Image correlation

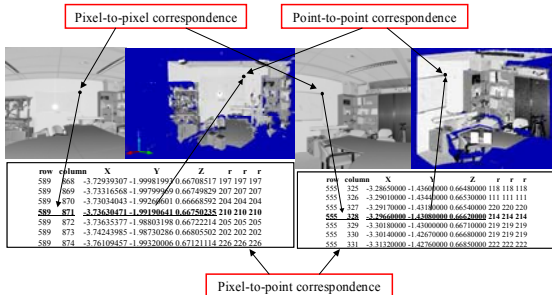

$$r = \frac{n \sum a_i b_i - \sum a_i \sum b_i}{\{ \{ n \sum a_i^2 - (\sum a_i)^2 \} \{ n \sum b_i^2 - (\sum b_i)^2 \} \}^{\frac{1}{2}}}$$

Experiments & Discussion

Dataset 2

Result comparison

Dataset 2	n_1 n_2	i	RMS	Max	Min	AVG	Time (min)
Cyclone 5.5	1785112 1716040	74	0.0081	0.1530	3.532e-008	0.0056	7
Presented method	1785112 1716040	4	0.0088	0.0310	0.0062	0.0132	0.8

Compared to ICP method, the accuracies are **compatible**, i.e. both of the accuracies are in the order of **millimetres**. The major difference is in the **automation level**, **performance** and the **number of iterations**.

02 July 2007

23

Experiments & Discussion

Summary

Although at initial stage, the performed tests revealed several advantages :

- A completely automatic process
- Applicable for any laser scanner that can output reflectance images
- Much faster compared to ICP method
- Distance invariance and iterative point-to-point corresponding process allow for improving the registering accuracy

02 July 2007

24

Summary & Outlook

Outlook

Future work will concentrate on:

- More aspects of laser scanner accuracy, e.g. resolution, edge effects, etc. should be considered to estimate the distance invariance error.
- The approach should be adapted to deal with panoramic reflectance imagery so that 360° full scans can be registered.
