

Presented at the FIG e-Working Week 2021,  
21-25 June 2021 in Virtually in the Netherlands

# SMART SURVEYORS FOR LAND AND WATER MANAGEMENT CHALLENGES IN A NEW REALITY

**e**WORKING WEEK 2021  
**20-25 JUNE**

Omer Faruk Atiz

Paper ID-11018

Investigation of the Kinematic PPP-AR Positioning Performance with Online CSRS-  
PPP Service

Session 5.4 GNSS Augmentation Services - Tuesday 22 June 10:30-12:00 CET

ORGANISED BY

PLATINUM SPONSORS

## Keynotes

- Traditionally precise point positioning method offers an ambiguity-float solution
- The implementation of AR needs additional hardware bias informations
- There are different approaches for AR on PPP
- Natural Resources Canada made transition to PPP-AR at the end of 2020 (CSRS-PPP version 3)
- CSRS-PPP's AR method is based on «Decoupled Satellite Clock» model
- AR is only used with GPS satellites

## Summary and Conclusion

- A comparison was made between CSRS-PPP-FLOAT and CSRS-PPP-AR with 6 days of data of KNY1 station
- The ambiguity fixing rates were over 99%
- The AR improved the kinematic PPP-AR, particularly at the east component

# Thank you for your attention.
