Key words: Curricula; Education; History; Young surveyor; Geomatics; Web Map Viewer; Educational Sciences;

SUMMARY

Mapping Geomatics Education Around the World is an innovative project that features an interactive web map viewer designed to explore and analyze geomatics education on a global scale. This resource allows users to identify and locate educational institutions offering programs in geomatics, land administration, geodesy, cartography, surveying, geographic information systems (GIS), and related disciplines. Through the viewer, one can access detailed information about academic programs, including education levels, available specializations, course durations, and admission requirements. The interactive map not only provides a global overview of the geographic distribution of these institutions but also facilitates comparisons and analyses between different regions and countries. Additionally, it incorporates advanced filtering and search tools that enable users to customize their exploration according to their specific interests. This project is a valuable tool for students seeking educational opportunities in geomatics, as well as for professionals and academics interested in understanding the trends and scope of this discipline worldwide. In summary, "Mapping Geomatics Education Around the World" offers an accessible and comprehensive platform for the visualization and analysis of geomatics and land administration education in a global context.
