Background

- The national territorial boundary of a state is as important as its sovereignty
- For Ghana in particular, the unambiguous affirmation of our territorial boundary is imperative in light of the recent ITLOS case with Cote D'Ivoire
- Situation is even more dire with the discovery of oil in commercial quantities
- Unlike other regions of the world, state boundaries in Africa are more complex;
 - Artificially created
 - Divide ethnic groups/common language groups

Problem

- Re-affirm and re-establish the boundary between Ghana-Togo as established by the joint British-French Survey team in 1929
- No report of Survey
- Most referenced features in the boundary description report are non-existent currently
- How to use current technology to re-affirm the Ghana-Togo boundary

SECTION 1.

(a) The Frontier between the GOLD COAST COLONY and that portion of TOGOLAND placed under the authority of the French Government starts from the sea at Pillar 1 on the road from DENU to LOME at an approximate distance from LOME lighthouse of 2,750 metres.

Proposed Solution

- Identify existing pillars (1929 series) along the boundary
- Re-observe using GNSS technology
- Compute coordinates in a geocentric coordinate system independent of either country
- Use boundary description report and the coordinates of the observed points to re-establish the Land Boundary Terminus
