CHCN AV

## Project Based Learning

- Bridges the gap between Industry expectations of work-ready graduates and Academic Institutions desires for research performance and status
- Project based capstone course in the final year of a program
- Different project every year
- No lectures, no exams – student led – Educator acts as a client
- Students elect a Managing Director and Deputy
- Students run meetings, allocate action items. Chair and Secretary rotated every week = Soft skills.
- Students work as one large group – maintains morale, engagement and motivation - ***All in it together!***
- Students decide on suitable communication platform (Google docs, WhatsApp, FB messenger etc)
- Course coordinator supports every step of the way

## Design of a Project Based Course

- A large, complex project should be designed with many elements such as research, planning, field work/ data collection, processing, analysis and reporting.
- Seek to use cutting edge and innovative techniques to realise the project outcome.
- Fit within university constraints = Timetabling, assessment requirements, other admin.
- Consider: weather (season), travel (ie on-campus, off-campus day trip/ multi-day), cost, logistics
- Consider: Number of students, skills of students, access to equipment and site.
- Choosing a suitable topic:
  - Research Based – partner with researchers to help solve a problem
  - Industry Based – partner with industry to utilise latest equipment/ techniques
  - Community Based – partner with community organisations for site access and to provide deliverables

## Assessing a Project Based Course

- **Literature review (30%):** Group report, 4-week timeline, chance to revise topic areas, propose a project plan, WHS, students allocated different areas, students appoint editors to produce professional doc – use templates and style guides, educator must provide feedback within a week or two for scaffolding.
- **Class Presentation (10%):** One large narrative. All students present their parts, and see the whole project. Opportunity to invite colleagues from your school, faculty, other students and industry.
- **Final Report (50%):** Group effort -individual sections. Write for surveyors to use. Cheat sheets. Templates/ style guides/ editors. Feedback from Lit rev informs a more professional outcome. Use correct referencing.
- **Self-Assessment (10%):** Senior students reflect on their performance. Consider their professional life as a graduate supervising staff. Students allocate themselves a mark based on their perceived performance. Very honest feedback. Empowers students and promotes maturity.

## Concluding Remarks

- Project-based learning gives surveying educators the freedom to explore ambitious projects.
- Projects could further their own research, work closely with industry or support a community organisation.
- Students run the project = Far more engaged. Students feel empowered!
- Projects allow educators to upskill themselves in new tech, software and techniques.
- Project-based courses require energy, creativity, agility and commitment.
- Project-based courses provide great opportunities for outreach and marketing of the profession to potential new students.
