Geospatial industry

In 2023, the growth rate of Geospatial industry reached **4.2%**, with a total output value of **811.1 billion yuan**. The growth rate increased by **0.7** percentage points compared to the previous year. The compound annual growth rate over the past five years was **6.4%**, and over the past ten years, it was **12.1%**.

自然资源部办公厅关于认真抓好《国土空间规划城市体检评估规程》贯彻落实工作的通知

各省、自治区、直辖市自然资源主管部门，新疆生产建设兵团自然资源局：

为深入贯彻落实《中共中央国务院关于建立国土空间规划体系并监督实施的若干意见》和“健全规划实时监测、定期评估、动态维护制度，建立城市体检评估机制”的指示精神，依据《中华人民共和国城乡规划法》《中华人民共和国土地管理法》等法律，自然资源部制定并发布了《国土空间规划城市体检评估规程》（以下简称《体检规程》，附件1）。现就实施要求通知如下：

一、突出引领作用，把规划实施规划作为前提，实施国土空间规划的基本要求，将城市体检评估作为规划、审批和维护城市国土空间规划的重要基础工作。各地在审批城市国土空间规划和审查“三区三线”划定成果时，应着重审查城市体检评估暴露问题和风险的治理措施。

POLICY SUMMARY ON THE “MASTER PLAN FOR NATIONAL KEY ECOSYSTEM PROTECTION AND RESTORATION MAJOR PROJECTS (2021-2035)”

July 16, 2020 Sino-German Environmental Partnership II

Amid concerns on how “green” China can remain under enormous recovery pressure due to the mounting economic fallout of the coronavirus outbreak, China’s National Development and Reform Commission (NDRC) and the Ministry of Natural Resources (MNR) jointly released the “Master Plan for National Key Ecosystem Protection and Restoration Major Projects (2021-2035)” (herein referred to as the “Master Plan”) on June 16, 2020. This key overarching policy framework was issued as both a continuation of the long-term national strategy and as a strong signal to reassure the world that China remains firmly committed to its environmental protection agendas.

Highlighted as China’s far-reaching guideline on ecosystem protection and restoration in the upcoming period, the Master Plan stipulates a set of time-bound ecosystem quality improvement targets by 2035, while rolling out nine major ecosystem protection and restoration projects across the country to put it on this envisioned path. The Master Plan characterizes the prescribed period as a pivotal time window for pursuing an “Ecological Civilization”, while paving the way towards the long-term strategic goals of realizing “Socialist Modernization” and achieving a “Beautiful China” by 2035.

Next-Generation Sustainability
Advancing the Future with Geospatial Intelligence

1-3 April 2025 | Melbourne, Australia

Chinese Academy of Surveying and Mapping

Founded in 1959 and under the leadership of the Ministry of Natural Resources of the P.R.C.

Organizational Positioning

CASM is the multi-disciplinary comprehensive research institution with the largest surveying and mapping geographic information in China. It is the only central-level non-profit scientific research institute, with a Class A surveying & mapping qualification and the ISO quality assurance system certification.

Organizational Goals

CASM will lead and promote the progress of surveying and mapping geographic information technology while shouldering the core responsibility of "two unifications" for natural resources management. It will also serve the economic & social development of China and major state strategies.

Organizational Personnel

CASM boasts one academician of the CAE Member, nine National Talents such as those under the national "Ten Thousand Talents Program" and the "National Hundred, Thousand and Ten Thousand Talents Program", and 22 researchers have been selected to join the team for the Ministry of Natural Resources high-level talent program.

Research Fields

Research fields covering geodesy and navigation, photogrammetric and remote sensing, geographic information system and cartography, geospatial big data, natural resources survey and monitoring, etc.

Chinese Academy of Surveying and Mapping

Founded in 1959 and under the leadership of the Ministry of Natural Resources of the P.R.C.

Research Institution

- The Institute of Geodesy and Geodynamics
- The Institute of Photogrammetry and Remote Sensing
- The Institute of Cartography and Geographic Information System
- The Research Center for Geospatial Big Data Application and the Research Center for Natural Resources Survey
- Monitoring and other research institutions

Scientific and technological innovation platforms

- State Key Laboratory of Spatial Datum
- The National Research Center for Surveying and Mapping Engineering Technology
- The National Field Science Observation and Research Station
- The International Joint Research Center for Surveying and Mapping Geographic Information
- The National Surveying and Mapping Geographic Information Metrology Station
- ...

Academic Journal

- International Journal of Image and Data Fusion
- 《测绘科学》 (Science of Surveying and Mapping)
- 《遥感信息》 (Remote Sensing Information)
- 《导航定位学报》 (Journal of Navigation and Positioning)

Professional Education

- Master's Degree Conferring Institution
- Postdoctoral Research Workstation
- Established a joint graduate training program with leading universities including Wuhan University, Tongji University, China University of Geosciences, China University of Mining and Technology, and Shandong University of Science and Technology...

Vision: CASM will become an industry leading surveying and mapping geographic information research institute within China as well as internationally renowned.

Advancing the Future with Geospatial Intelligence

Thanks!

Find out about this journal

IJIDF provides a single source of information for a wide range of remote sensing image and data fusion methodologies, developments, techniques and applications. Image and data fusion techniques are important for combining the many sources of satellite, airborne and ground based imaging systems, and integrating these with other related data sets for enhanced information extraction and decision making.

Aims & Scope

Image and data fusion aims at the integration of multi-sensor, multi-temporal, multi-resolution and multi-platform image data, together with geospatial data, GIS, in-situ, and other statistical data sets for improved information extraction, as well as to increase the reliability of the information. This leads to more accurate information that provides for robust operational performance, i.e. increased confidence, reduced ambiguity and improved classification enabling evidence based management.

This journal focuses on the theories, methodologies and applications of image and data fusion from SAR (Synthetic Aperture Radar) data, LIDAR data and all types of optical images. It also encourages submission on a broad range of topics such as concept studies, new fusion techniques at different processing level, image and data fusion architectures, algorithms, and novel applications. Papers addressing fusion needs for data from new or planned platforms and sensors are specifically invited.
