

The Fig Climate Compass Task Force's Living Atlas

Cromwell Manaloto (Italy)

Key words: Climate Resilience, Sustainability,

SUMMARY

As we approach the end of our term, The FIG Climate Compass Task Force has been working in identifying the roles and responsibilities of the Surveying Profession when it comes to Climate related issues, a Climate smart profession, and a Climate-ready society.

As part of the FIG's effort in championing resilience through collaboration and the Task Force's Terms of Reference, we are excited to present the CCTF's Living Atlas. A collection of all the knowledge gathered in the last four years where land professional, practicing surveyors, grassroots communities, policy-makers and stakeholders alike, have had the opportunity to present case studies and share information from all parts of the globe.

The Living Atlas aims to be a testament to the fundamental role that land professionals occupy in this evolving society, albeit, climate sensitive communities in the digital age. Moreso, a quick reference for professionals to learn what's what in the world and to keep the momentum going in promoting the essential contribution that we make.
